Count of CustomerID by Customers Segment

Top 5 Customers by spending

This dashboard classifies customers based on their spending behavior and number of orders. It helps identify high-value customers and support better marketing and retention decisions.

Key Insights

1. Revenue performance was analyzed across years, categories, and products to identify sales trends.

2. The top-performing products and categories were identified based on both revenue and profit.

3. Customer analysis showed the distribution of customers by age group, gender, and city.

4. Return rate was calculated to measure the percentage of returned orders and understand its impact on business performance.

5. Customer segmentation helped classify customers based on spending behavior.
